

BUYING ETHER

For lowest fees and safe payment we recommend to buy EVN tokens with Ether (ETH). Buying EVN by credit card will result your token to end up in a locking period of 4-12 months (see envion.org/faq). This locking period is a protection for our investors needed for credit card payments. Paying by credit card or BTC furthermore results in higher transaction costs and by that, lower payouts in the first payout rounds.

If you don't own ETH yet, we have written the following guide that briefly explains how to buy this popular cryptocurrency.

STEP 1 INSTALLING WALLET SOFTWARE

To receive and send Ether, you need to install an Ethereum wallet software like the **Chrome browser plugin „MetaMask“** or an online wallet like „MyEtherWallet“.

How to use MetaMask (recommended)

envion.org/how2mema

Our simple step-by-step guide to use MetaMask

How to use MyEtherWallet (for experts)

The official guide for the popular ETH wallet

STEP 2 WALLET CREATION

Using MetaMask, you can skip this step as your wallet has already been set up.

After the wallet software has been installed, you will have to generate a new wallet to create **your personal wallet's** Ethereum address.

STEP 3 BUYING AND SENDING ETH TO WALLET

Now visit an online seller like Coinbase.com, Cex.io or BitPanda.com. Buy ETH by credit card or bank transfer and let it be sent to your previously created wallet's Ethereum address.

*If you are situated in the US, the most comfortable way is to **buy ETH directly in MetaMask**.*

Congrats! You are prepared to register for the EVN tokensale starting December 15th at envion.org/ico
